

What to do with an ELEMENT NAME

When you get a new element for your kiln write that name on the side of the kiln for posterity and our sanity.
This contains all the info ever needed to replicate the element. Very Simple.

To this point, say the name of your element is E240-14-166:

This name gives you a lot of information

- It was made for a 240 volt power source
- When connected to 240 volts this will pull 14 amps
- By Ohms law it produces 3360 watts. (Volts x Amps = Watts)
- Also by Ohms law it has 17.143 Ohms. (Volts/Amps= Ohms)
- Made of 16 gauge wire, Kanthal A-1 type wire
- It was wound on the #6 arbor (Element has a 3/8" i.d.)

CALL DUDLEY

603-456-3569

IN A COUPLE OF MINUTES THE
NEW ELEMENT COULD BE ON ITS WAY.
