

Here is a piece made by Chris Johnson of California. He has been running this glory for many years and has this to say:

"Pictured below is a 22" deep hole 14" ID with a 9" ring running on the above mentioned burner that you make for me. Been doing fine for about 12 years or so. In fact we turn it down periodically throughout the day to the point where by the end of the day the air valve is only open 1/2 turn. Just fyi the air valve starts the day fully open.

I would describe this as a 9" glory hole with an interior of 14" w x 22" Deep with a 5" small closure door in front.

He runs this on a forced air system.

This burner has some modifications where I put a larger 1-1/4" fitting on the back and for that I charge a 25.00 alteration fee cause it involves drilling and changing the basic configurations of the backplate. The total price is 145.00 plus 25.00 = \$170.00 each. And I would also ask you to buy two of them at a time.

If you have questions please give me a call.

Sincerely,

Dudley
